#### 3.4 Aerodynamics

Measured with a double chamber intake rig acc. to DIN EN ISO 5801. Measurement conditions: Normal air density = 1,2 kg/m3; Temperature  $23^{\circ}$  +/ -  $3^{\circ}$ ; In the intake and outlet area should not be any solid obstruction within 0,5 m. Motor shaft horizontal. The information is only valid under the specified test conditions and may be changed by the installation conditions. If there are deviations from the standard test conditions, the characteristic values must be checked under the installed conditions.
